

# What causes the error "Had IO Exception with stylesheet file: ... unknown protocol: daisyskin (or wikidata)"?

---

When developing custom XSLT files, you might come across the following error:

```
Unable to get transformer handler for daisyskin://(default)document-styling/html/XYZ.xsl
Exception when creating Transformer from daisyskin://(default)document-styling/html/XYZ.xsl
Had IO Exception with stylesheet file: daisyskin:xslt/some-file.xsl
unknown protocol: daisyskin
```

This error most likely means that there is an `xsl:import` or `xsl:include` in the XYZ.xsl, which refers to a file (`daisyskin:xslt/some-file.xsl`) that doesn't exist.
