

Daisy installed on OS X, the repository server crashes when uploading an image?

When uploading an image on OS X 10.4.6 (Java build 1.5.0_06-112), the repository server exits with the following message:

```
2006-06-22 12:34:41.016 java[18896] CFLog (0): CFMessagePort: bootstrap_register(): failed
 1100 (0x44c), port = 0x45703, name = 'Processes-2.18896'
See /usr/include/servers/bootstrap_defs.h for the error codes.
2006-06-22 12:34:41.017 java[18896] CFLog (99): CFMessagePortCreateLocal(): failed to name
Mach port (Processes-2.18896)
CFMessagePortCreateLocal failed (name = Processes-2.18896 error = 0)
```

The solution for the problem can be found here:
