

# Where are / what are the org.outerx.daisy.x10 classes?

---

These classes are automatically generated from [XML Schema](http://www.w3.org/XML/Schema)<sup>1</sup> files during the build by a tool called [XMLBeans](http://xmlbeans.apache.org)<sup>2</sup>.

The XML Schema files can be found in the src dir of the various xmlschema-bindings subprojects in the Daisy source tree.
